

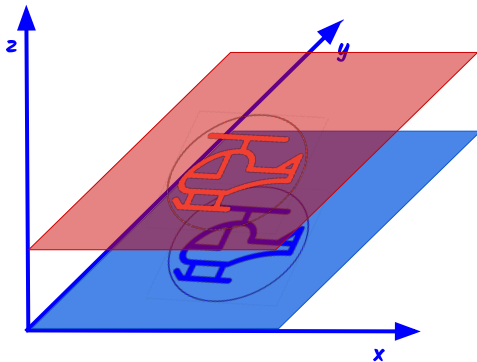

Figure 21 – A “2D helicopter made of bubbles”¹ in the blue Bubbleland and another “2D helicopter made of bubbles” in the red Bubbleland. Suppose the largest possible bubble in both Bubblelands is 12 cm and that the Bubblelands are separated by 30 cm. The helicopters would be only 30 centimeters apart. But, although close, one helicopter would never know of the existence of the other, or of any other “object made of bubbles” from the other Bubbleland.
